

Francesca & Francesca Leva

Nice. Powerful.

The beauty of Francesca is not in the details, but in its unlimited power. With a constant temperature, which even works without cool flash.

Preparing Espresso with an endless power is what a barista wants. With Francesca this is possible. It is our espresso dual boiler queen with an external, round design water tank. The perfect taste pleasure is ensured by the Bellezza brewing unit, based loosely on the E61, which is installed in the Francesca.

It is our own development and very durable.

Designed for the fastest first-time use.

There is also PID control, a shot timer and a temperature constancy that even works without cool flash.

In this way the first espresso in the morning gets into your cup a little faster. Stainless steel on all corners and edges of the straight-line construction and the powerful, always available steam output round off our Francesca. The Francesca comes to you with rotary valves while the Francesca Leva with tilt valves.

Espresso that you will never forget.
